## G&S Foods Product Transport and Storage

### Transport

Our Honey Powder and related products must be stored and transported in temperatures 25°C and below.

We always recommend Airfreight or Reefer Container for the transportation of the honey products. If your product is being exported through higher temperatures, we would recommend getting Thermal Heat Control Covers for the pallet.

- They will assist with temp control to some degree but warehousing, storage, retail display etc must be monitored as well.
- Please ensure your customers understand this.

### A. Thermal Pallet Covers

- See link below – you can buy these online.
- A New Zealand based Company called IPAK – There are custom sizes you can choose from.

**IPAK website:** <https://www.ipak.co.nz/shop/Insulation+Products/Insulated+Pallet+Covers.html>

Airotherm Insulation Blankets are an excellent method of insulating bulk quantities of goods. They are widely used worldwide to protect goods such as Seafood, Meat Ice Cream and perishable products.

### Characteristics:

- Sturdy - Tear Proof, Puncture resistant, Waterproof
- Arrives folded - space saving
- Easy to apply - fits perfectly, saves labour
- Easy to dispose - collapses and 100% recyclable

## **B. Heat Control - Thermal Blankets**

[https://www.secureload.co.nz/heat\\_blankets.html](https://www.secureload.co.nz/heat_blankets.html)

## **C. Data Logger Devices**

- Ask your Logistics Agent if they can supply Data Logger Devices that travel with the goods - these log temperatures along the transport route and if and when they may have been subjected to high temperatures.
- This assists with possible liability issues should they arise.
- Your Logistics Agent should be able to advise on Temperature Sensitive product and may have the Thermal Pallet Covers.
- Instructions should be given for Temperature controlled storage at customs and throughout the Transport chain.

We recommend using GVI Logistics (<https://www.gvi.co.nz/>) for all export and transportation, or Big Chill for domestic freight, as they have thorough understanding of our products.

Since we have very limited storage at our factory, all orders will be dispatched as soon as possible after production to your nominated shipping address.
